NOTES :
 Storm water runoff due to impervious surfaces such as roofs and driveways cannot be allowed to flow onto adjacent lots and must be intercepted by a point of surface discharge to contain the volume of runoff. Therefore provide ponding 0.5' deep and of an area equal to 1% of the area of the contributing impervious surface.
 Distribution of irrigation water is to be according to the Distribution Plan filed with the State Engineers Office.
 All Septic Drain Fields shall be located within 320 feet of well head.
 Utility and drainage easements are 10' on all sides of each lot unless otherwise shown.
 STAR VALLEY CONSERVATION DISTRICT has reviewed the proposed Nordic Ranches Subdivision. USDA-NRCS evaluation indicates some soil limitations. Resolving distinctive soil is critical to prevent noxious weed invasion. The degree of soil limitations for this soil use in the proposed subdivision is moderate for dwellings without basements, due to water-swell potential. Dwellings with basements is slight. The degree of soil limitations for road roads and streets for the soil use in the proposed subdivision is severe due to low strength and frost action. The very poorly leached sand or sand soil with less than 1% clay makes for poor infiltration for septic tank absorption fields.
 The well supplying water to Nordic Ranches Div. 10, 11, & 12 is located more than 320 feet from any single case drain field. Information for specific revegetation methods can be obtained from Star Valley Conservation District, Action Nature Resources Conservation Service, or Lincoln County Extension Service Field Office.
